

Laminate flooring

PARADOR

living performance

Art of living meets perfor- mance demand

For us, the art of living is an appreciation of beauty and to create inspiration out of it at any moment in time.

Performance is a permanent feature of our life. Day after day, we demand performance. Delivering daily performance requires solid ground beneath our feet.

Parador – living performance.

PARADOR

Every day quality

Living spaces are an expression of our individual attitude to life and of our own demands. For us, making high demands means having a special awareness for quality.

Parador offers premium products for quality living. The quality of Parador can be seen in the use of high value materials that are healthy for the home, perfectly finished with a critical flair for natural impression and first-class design.

Performance

Systematic strength

When it comes to the laminate flooring production, Parador always considers the demands of its' customers. This results in creative solutions with a system – based on up-to-date technology, perfect craftsmanship and vast experience. This is what characterises Parador laminate flooring:

Healthy living

Parador laminate flooring is made of almost 100 % wood and is therefore a natural and sustainable product. Our floors are anti-static (Classic, Trendtime) and low on emissions. During production, only controlled materials that are healthy for the home are used. Due to its low installation height of between 7 and 9 mm alongside ultimate stability, Parador laminate flooring can be used everywhere without any problem.

Robust

Different wear classes show that Parador laminate flooring is also suitable for heavy duty use. Parador places particular value on the specially highly compressed core board, which guarantees reliable swell protection and a high load bearing capacity. With the constant development of the overlays, Parador sets standards in the durability of laminate floors.

Intelligent

The newly developed, patented click-system, Safe-Lock® PRO, enables Parador laminate flooring to be installed even easier and faster, and without tools. The highest fitting accuracy and stability, thanks to unique form and force locking, guarantee a permanently perfect installation pattern.

Renovation-friendly

With product thicknesses varying from 7mm-9mm and with ultimate stability, Parador laminate flooring can be installed virtually anywhere.

Easy to maintain

Laminate flooring is very easy to clean and is perfectly suited for households with children, allergy sufferers and pets. Regular cleaning with a vacuum cleaner or soft brush is sufficient in most cases.

Made in Germany

Parador places value on products that are produced at the company's own site in Germany – very much in keeping with our self-image of ensuring the highest possible quality using our own expertise and craftsmanship.

Tested Rating »recommended«

To ensure the on-going quality of our brand, we also undergo external tests. Our quality standard goes beyond the statutory provisions (CE EN 14041:08, conformity mark, Émissions dans l'air intérieur), which is notably demonstrated by the various voluntary certifications.

EN 14041:08
The CE mark is mandatory under EU law in conjunction with product safety.

Émissions dans l'air intérieur (Class A)
This French classification identifies the quality of the indoor air.

Blue Angel
The »Blue Angel« certifies Parador laminate flooring as a low emission product. The eco-label RAL-UZ 176 is awarded by the German Institute for Quality Assurance and Certification with the participation of the Federal Environment Agency.

TÜV Rheinland
Parador laminate flooring earns the TÜV test mark due to its perfect product quality, product safety, easy to understand user documentation, verified performance statements, handling and application quality as well as through the independent monitoring of its own production by the independent and objective institute TÜV Rheinland, Germany.

LGA tested for harmful substances
The quality seal of ecological product testing identifies products that have been tested for harmful substances and are low on emissions. Parador laminate flooring not only meets the award requirements but comes below them.

PEFC™
Products are awarded this trademark provided that they meet the certification requirements for documentation and improvement of sustainable forestry management regarding of economic, ecological and social standards.

EPD
Against the background of energy efficiency, sustainability and increasing building certifications, the Environmental Product Declaration (EPD), which is awarded based on the ecological balance, is becoming increasingly important.

Design as an expression of individuality

It is the unlimited scope for creativity that makes Parador laminate flooring stand out. Decors, physical appearance, formats, groove-design and surface texture: when skilfully coordinated, floors emerge that make an impact with their beauty.

Just as Parador engineered wood floors are popular templates for high quality interpretations of wood decors, fantasy and self-assured style are the basis on which our design team, together with out-standing personalities from the international design scene, give every floor its unmistakable character and style.

Surface textures

For the complete image

Genuine beauty not only pleases the eye: the seductively natural look and feel of Parador laminate floors provide an impressively harmonious experience, where the material used as a template, be it wood, stone or concrete, tangibly comes into its own. In this respect the different textures are embossed sometimes deeper, sometimes flatter, but are always tangible and kind to all those who walk on them barefoot, with shoes or on four paws: resistant and easy to clean.

Genuine surface textures: Synchronised pores

The finger tips feel what the eyes see. In case of a synchronised pore, the tangible texture of the surface exactly follows the visible wood texture of the decor pattern. The floor thus becomes a perfect imitation of nature.

Endless Beauty: for a generous look to a space

Due to the optically consistent decor on the end edges, endless beauty creates an unmistakable effect. The planks look endlessly long and make the space look much bigger.

Groove design

An important detail

The difference is in the detail. The characteristic profile of a floor is largely determined by its groove pattern. Whilst an installation without grooves, as with a »block« floor, creates a calm, self-contained impression, an installation with grooves underlines the individual character of the planks.

Without grooves

In the case of the classic installation without grooves, the planks are joined together without noticeable gaps.

- › closed overall impression
- › harmonious pattern

4-V groove

The all-round bevelled long and end edges result in a pattern with the charm of a real wood floor, as each single plank is emphasised.

- › Grooves lacquered to match the colour of the decor
- › Groove sizes milled more strikingly or discreetly to match the decor

Surface textures at a glance

Matt-finish texture

Rustic texture

The look of roughly cut wood, as can be found in old farmhouses for example, is reproduced by this surface texture.

Elegant texture

Areas emphasised with branches and flowers enhance the natural quality of the decor – in an optical and tangible manner.

Rough-sawn texture

This texture is distinguished by the characteristic rough, porous surface of sawn timber and by a fashionable used look with saw marks.

Matt-finish texture

With its porous, fine-veined appearance, it resembles untreated wood and invites you to touch it – for a particularly haptic experience.

Brushed texture

The brushed texture intensifies the naturally pleasant feel of wood through the effect of a sand-blasted, brushed surface.

Stone texture

The surface with its universal embossed texture is based on modern stone floors. Tangible uneven patches just like on real stone!

Natural texture

Vintage texture

The incomparable charm of days gone by comes to life through special wood looks (knots, cracks, filled areas).

Natural texture

The natural texture makes the grain tangible. Individual wood grains thus have a much more realistic effect – and feel that way too.

Wood texture

The surface has a universal wood texture embossing. It adds to the impression of real wood in terms of look and feel.

Brilliant texture

The brilliant texture underlines the character of a flowery grained timber and emphasises the individual strips of the block look.

Satin finish

With its refined, matt look, this surface has the characteristic radiance of oiled solid timbers.

Relief texture

The clearly visible and tangible embossing creates the impression of real wood and plays with matt gloss effects.

Fine-grained texture

This surface is characterised by a discreet wood texture with fine pores, which gives the laminate plank a lively and at the same time refined look.

Natural matt texture

The particularly matt look gives the impression of a naturally treated wood surface. The natural character of the wood unfolds elegantly.

Antique matt texture

Antique wood flooring finds its high value, genuine interpretation here. Rustically embossed with signs of finishing and use resulting in a matt antique texture.

Relief texture

Basic

Entry level to Parador quality

Those who are price conscious but do not want to forego quality will find an impressive selection of attractive ranges in the Basic Collection.

Edge swelling protection

Guarantee (home): 12 years

Classic

Timeless elegance

Uncompromising in quality, classic in design and universally applicable: the Classic Collection is made for people with clear values.

Laminate flooring

Function and technology

Besides their impressive looks, Parador laminate floors are distinguished by their functional composition and easy handling. The result of this »made in Germany« workmanship: high durability, swell protection and dimensional stability. When it comes to installation, Parador laminate floors also impress by means of intelligent technology, which enables a simple application without tools.

①

Overlay

The highly wear-resistant, watertight top layer made of melamine resin protects the Parador laminate floor from normal everyday wear and tear, micro-scratches and dropped objects. The high corundum content is responsible for this, as its hardness is only surpassed by diamond.

②

Decor paper

The elaborately reproduced decors are fascinating with amazingly genuine imitations of many natural materials. The decor print made with solvent-free colours impresses with extraordinary brilliance. The impregnation using melamine resin also protects against moisture.

③

HDF core board

The highly compressed, swell-resistant core board provides high dimensional stability and thus minimises the influences caused by climate fluctuations or extraordinary stresses and strains. In addition, the all-round edge impregnation ensures excellent edge swell protection. On the Classic and Trendtime product lines, the swell protection of the special core board is almost doubled by the Aqua-Proof method.

④

Balancing layer

The reverse side of the laminate floor is formed by the balancing layer paper, which compensates against tension and prevents the planks from warping. At the same time, the impregnated balancing layer paper protects the core board against moisture from beneath.

⑤

Safe-Lock® PRO

The improved, patented click mechanism, Safe-Lock® PRO, is milled directly in the special core board and is characterised by several benefits:

- › high fitting accuracy for invisible plank transitions and totally even surfaces,
- › extremely high connection stability for permanent fitting accuracy,
- › precisely, safely and quickly installed,
- › effortless handling: Marks on the click connection specify the starting points for inserting the planks.

Step 1: Place on the green dot

Step 2: Push into the connection

Accessories

Beauty with system

Those who are looking for longevity from their Parador laminate floor opt for quality every time. As a system supplier, Parador stocks co-ordinated accessories for installation and value retention: from skirtings, clips and end caps to underlays and products, Parador offers quality from one source: perfection – planned to the end.

Skirtings

For the perfect finish

From A as in Apple to Z as in Zinc, Parador stocks matching skirtings for every laminate decor. As an alternative, you can make a conscious design statement with stainless steel, black or white.

- › Decor profiles with high quality MDF core
- › Suitable for damp rooms
- › Torsion-free
- › Fully encased at edges
- › Excellent surface quality

The mouldings are easy to fasten and assemble using the practical clip technology. End caps and transition caps plus interior and exterior corners in various looks round off the Parador range.

Underlays

Feel good underfoot

Parador offers the right underlay for every subfloor and the right solution for every use.

Acoustic underlays from the Akustik-Protect range are specially developed for floating installations. The high-tech acoustic mats offer ambient noise and impact noise insulation and thus increase the feel-good factor.

Parador underlays feature high compressive strength which can compensate for any slight unevenness of the sub-floor. On mineral subfloors, the integrated moisture barrier provides the necessary moisture protection.

Whether in a new build or after renovation, whether it is a high-tech solution or a purely natural product made of wood fibres: Parador underlays perfectly enhance the quality of the floor covering.

Accessories

For the right care and reliable processing

Parador recommends and offers products specially suited for maintaining the appearance of the floor-covering thereby retaining its' value.

Matching tools and miscellaneous accessories round off the range. This comprehensive all-round carefree package ensures lasting value and satisfaction with the floor.

Setting standards Practising responsibility

As a traditional wood processing company, we have a particular awareness for our environment. For us at Parador, living with a certain quality standard goes hand in hand with the responsibility to conserve the planet for future generations. This includes handling our resources sustainably – by means of active reforestation. Every product made of wood makes an active contribution towards climate protection. As the only easily reproducible systems, trees break down CO₂, the greenhouse gas responsible for climate warming, into oxygen and carbon. As carbon reservoirs essential for the survival of the planet, people will increasingly become conscious of using wood products, especially in building and renovation. Products made of wood and wood-based materials are sustainable and help to secure the future of the next generations.

FSC™ certification

Wood products that come from forests managed in an exemplary manner are awarded this trademark. For this purpose, the Forest Stewardship Council (FSC™) sets strict environmental requirements worldwide as well as high social and economic standards. Parador takes this path voluntarily out of conviction.

PEFC™ certification

PEFC™ is a global organisation with the aim of establishing sustainable forestry worldwide. Every product that bears the PEFC™ label, comes from a certified product chain, in which the forestry management, including the transport of the wood to the forest road, is featured.

Responsibility in society

As an internationally operating company, we are aware of our social responsibility. We have been committed to the Plant-for-the-Planet foundation since 2011. Children from all over the world have come together to form a network under the umbrella of the student initiative - with the aim of ending the climate crisis. Their way of achieving this: acting immediately, because tough talks do not stop the glaciers and rain forests from disappearing. Instead, Plant-for-the-Planet is planting trees as a sign of climate justice - until a billion new trees are planted worldwide by 2020. As a wood processing company, active reforestation in particular is an important element of our social responsibility. We support the initiative with tree-planting campaigns, children's academies and numerous other events. And with great success: to date, we have trained nearly 400 children to be climate ambassadors and planted over 100,000 trees.

Responsibility in production

Starting with production, we set standards with our innovative floors and panels across their entire life cycle. We thus develop and produce solely at our sites in Germany and Austria. Our focus here is on environmentally-friendly manufacturing with natural materials. We get our main raw material, wood, from sustainably managed forests. We are therefore able to supply real wood that comes solely from monitored sources of supply. The environmental standards defined by us apply along the entire value creation chain, starting with our suppliers.

Production cycle

Our work is characterised by the way we conserve resources. We prevent emission and feed recyclable materials back into the production cycle. Whilst the use of predominantly domestic timbers in the manufacture of engineered wood guarantees short transport routes, the support material of our other floors and panels consists entirely of recyclable materials. The decor papers used on our laminate floors are composed of certified materials.
